CHELATED MULTI MICRONUTRIENT FERTILIZER

Like humans, plants need a balanced nutrition comprising of macronutrients, secondary nutrients and micronutrients.

### Macro and Secondary nutrients

Macronutrients that are elements required by plants in relatively large quantities such as Carbon, Oxygen, Hydrogen, Nitrogen, Phosphorus, Potassium, Calcium Magnesium and Sulfur.

### Micronutrients

Micronutrients are elements which are essential for plant growth, but are required in much smaller quantity. The micronutrients are Zinc (Zn), Iron (Fe), Boron (B), Molybdenum (Mo), Manganese (Mn), Copper (Cu) and Chloride (Cl).

### The important functions of various micronutrient's

Zinc (Zn)	Enhances the plant growth.
Iron (Fe)	Essential for formation of chlorophyll.
Boron (B)	Helps in the uptake of nutrients. Essential for seed and fruit development.
Molybdenum (Mo)	Helps in the uptake of nitrogen.
Manganese (Mn)	Functions with enzyme systems involved in breakdown of carbohydrates, and nitrogen metabolism.
Copper (Cu)	Aids in root metabolism and helps in the utilization of proteins.

### Features of Yieldsmor

- Yieldsmor is 100% chelated foliar multi micronutrients.
- Available in liquid form – hence ease of application.
- The chelated form ensures maximum nutrient uptake and higher utilization of all micronutrients.  
**100% utilization + No wastage = Value for money.**
- Absorbed most effectively by actively growing plants with young leaves.
- Yieldsmor is scientifically chelated and designed for use on agricultural and horticultural crops for the purpose of preventing or correcting micronutrient deficiencies.
- Immediate post-irrigation or post rainfall applications give best foliar uptake.

### Recommendations

Dosage	: 1 – 2 ml per liter of water
Spray volume	: Sufficient to cover the entire crop
Compatibility	: May be applied alone or can be mixed with most agro-chemicals
